PROFESSIONAL SUMMARY

PHP Web Developer with 5+ years of commercial experience in PHP and Laravel (versions 5–12). Build and maintain booking, payment, and messaging platforms: REST APIs, third-party integrations, queues, and real-time features. Strong in MySQL and PostgreSQL optimization, Redis caching, and RabbitMQ. Review code, mentor junior developers, and design new modules; integrate LLM APIs (OpenAI, Anthropic) into products.

PROFESSIONAL EXPERIENCE

PHP Web Developer Feb 2022 – Nov 2026

Allmatics

- Develop and enhance a Laravel-based Canadian platform for the sale and rental of storage units and portable containers, enabling customers to arrange transportation across supported provinces throughout Canada.
- Implemented location-based service discovery that identifies users' locations and presents the most relevant storage, rental, and transportation options, increasing booking conversion by 55%.
- Maintain and improve legacy functionality — including discounts, promotional codes, booking calendars, and related workflows — while delivering new product features.
- Build API clients for storage operations and integrate the platform with Zoho, Google APIs, Google Ads audiences, SEO tools, and marketing analytics and tracking systems, reducing manual reporting time by 30%.
- Developed booking payment logic, including price calculation and payment gateway integration.
- Optimized database performance by adding indexes, removing N+1 and slow queries, and caching frequently requested data in Redis.
- Moved long-running operations to Laravel queues and scheduled background jobs.
- Designed the architecture of new modules, reviewed teammates' code, and mentored junior developers.
- Took part in upgrading the platform from PHP 7.4 to 8.2 with the corresponding Laravel upgrades, and covered business-critical logic with automated tests.

PHP Web Developer May 2025 – Jul 2026

IT-STEP (part-time)

- Developed and maintained monolithic and microservices backend systems using PHP, Laravel, and Symfony.
- Expanded reusable Laravel and Yii2 packages, reducing code duplication and improving consistency across multiple projects.
- Built real-time messaging via WebSockets and integrated WhatsApp (including voice calls over SIP), Messenger, Telegram, and HelpCrunch through Meta and third-party APIs.
- Designed secure payment workflows using LiqPay and NOWPayments, including transaction processing, webhook handling, and callback management.
- Improved MySQL and PostgreSQL performance through query optimization and indexing, and moved heavy tasks to asynchronous processing with RabbitMQ and Redis caching, increasing throughput by 20%.
- Designed and implemented RESTful and SOAP APIs (JSON, XML) for third-party integrations.
- Integrated OpenAI, Anthropic, Gemini, and other LLM APIs with function calling and knowledge-base workflows; built AI agents and MCP-based automation using Claude and OpenCode.
- Refactored legacy PHP applications, improving maintainability and reducing technical debt.

Back-end Developer Sep 2023 – Apr 2025
Stellar-Nova (part-time)

- Delivered a Laravel-based online messaging platform where users can communicate with content creators and purchase exclusive photo and video content.
- Implemented traditional and cryptocurrency payment workflows, including transaction processing, balance management, and financial calculation logic, handling 10K payment transactions per month.
- Built real-time communication functionality using WebSockets and contributed to a scalable infrastructure powered by AWS, Docker, and Redis.
- Improved user-behavior tracking and personalized recommendation logic to improve the customer experience by matching users with the most relevant creators.
- Containerized development and production environments using Docker and deployed cloud infrastructure on AWS with CDN-based content delivery.

Full-stack PHP Developer May 2021 – Feb 2022
Bleecker

- Built and maintained a Laravel e-commerce platform for a Ukrainian bedding retailer, supporting core business operations and online order processing.
- Integrated the platform with CRM systems and the Nova Poshta API, streamlining delivery management and reducing manual order-processing tasks.
- Applied business logic for pricing calculations, inventory tracking, warehouse management, and related e-commerce workflows.

TECHNICAL SKILLS

Languages & Markup: PHP (7.4–8.4), JavaScript, HTML, CSS, SQL, XML, JSON
Frameworks & Backend: Laravel 5–12 (Eloquent, Queues), Symfony, Yii2, REST APIs, SOAP APIs, WebSockets, Microservices, Custom Packages
Databases & Caching: MySQL, PostgreSQL, Redis, Memcached, Indexing and Query Tuning
Infrastructure: RabbitMQ, Docker, AWS, CDN, Git, Distributed Systems
Payments & Messaging: LiqPay, NOWPayments, Webhooks, WhatsApp, Facebook Messenger, Telegram, HelpCrunch, WhatsApp Calls via SIP
AI Integrations: OpenAI, Anthropic, MCP & Function Calling

EDUCATION

Master of Science in Computer Science
Uzhgorod National University, Uzhgorod, Ukraine
2021 – 2022

Bachelor of Science in Computer Science
Uzhgorod National University, Uzhgorod, Ukraine
2017 – 2021

LANGUAGES

Ukrainian: Native
English: B2 Upper-Intermediate
